DETAILED ACTION

Specification

The abstract of the disclosure is objected to because it does not clearly (unconventional language choice and poor grammar) describe the invention and distinctly focus upon that which the applicant feels is different over the prior art. Correction is required. See MPEP § 608.01(b).

The disclosure is objected to because of the following informalities: Page 1 [Cross Reference to Related Applications]: "prior Japanese Patent Applications" should be "prior Japanese Patent Application" Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "rod portion" twice; neither have antecedent basis for a rod. The recitation of a rod fixing apparatus does not require a rod to be present. If applicant desires to positively recite the structure of a rod, applicant must claim a rod in combination to a pressure fixing device and protruding portions. Claim 2 has been rejected for being dependent upon a claim rejected under 35 UCS 112.

Claim 3 recites the limitation "rod" and again lacks antecedent basis for a rod. Follow the instructions set forth above in order to claim a rod in combination properly.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Jackson (US Patent 6,110,172).

Jackson discloses a bone screw assembly (**1, Figure 1**) comprising a pressure-fixing device (**3 and 4**) for fixing the spinal rod (**15**) within the head portion (**7**) and protruding portions (**17**) that engage the spinal rod (**15**) along on at both end sides as well as acting as a rough surface along the length of the bone screw (**2**).
